Safe Guide

This is the safe area for important graphics and text that form the body of your artwork. Keep these elements inside this line so that they are safely away from the edge that will be cut, in case of any variance in printing or cutting. *1/4" inside of the final edge.*

Cut Edge / Final Edge

This is the final size of the printed piece after cutting. It represents the dimensions of the finished product.

Bleed

The printed area that goes beyond the edge where the material will be cut. Extend any artwork and background colors that you want to reach right to the edge of the final product into this area. This will give a margin that accounts for any variance in the cut line. *1/8" outside of the final edge.*
